

2023-2024 TAMU Angora Billy Pasture Test

These goats arrived to Sonora on December 12th, 2023. Coalson, Jake and all goat owners ear tagged the goats and weighed them. No obvious abnormalities were observed on any of the goats. Some representative animals from each operation were fecal sampled and it was determined there was not an immediate need to deworm. All goats were moved out together into the pasture on Dec 15. If the goats had a secondary ID or number, it is recorded in the "Herd ID" column. Most billies did not have a herd ID. The test officially started on Feb 8, again some representative animals were fecal sampled, again no need to deworm. On May 17th, all goats were weighed and a fecal sampled was collected for NIR juniper analysis and a FEC. All goats were dewormed with a copper bolus and Prohibit drench on May 17th.

Initial # of Goats: 55
 Total Breeders: 5
